

SECMATION

Security x Modularity = Acceleration™

Secure Autonomous Systems Development, Embedded Software Security, and Industrial Control Systems Technology

Value Proposition

- Integrated systems security for autonomous systems, Industrial Control Systems, and expendable systems
- Innovative technologies and products for advanced protection of embedded computing systems
- High assurance cybersecurity, advanced FIPS 140-2 cryptography, Low SWaP-C encryption for edge devices and applications

Products & Services

Core Competencies

- Enhanced FIPS 140-2 Cryptography
- Advanced Encryption
- Reverse Engineering
- Embedded Software Security
- Software, Electronic & Systems Engineering
- Security Design Engineering
- Systems Security Integration
- Secure Product Development

Technology Focus Areas

- Digital Engineering
- Weapons Systems
- Open Architecture Development
- Secure Communications
- Wireless Security & Control
- Modular Security for Uncrewed Systems
- Hypervisors with Anti-Tamper
- Industrial Control Systems Security

Customers Served

Our portfolio includes federal government, Department of Defense, commercial industry, and academic partners.

- United States Air Force Armaments Directorate
- US Army Ground Vehicle Systems Center
- Air Force Research Lab
- Missile Defense Agency
- Office of Naval Research
- Naval Facilities Command

NAICS Codes & Facilities

541715, 541330, 541512, 332993

Secret Facility Clearance & DCAA Approved Accounting System

Key Differentiators

Agile defense-focused software development and engineering firm with extensive experience and expertise in cybersecurity, advanced encryption, security product development, and embedded security for autonomous systems. We provide advanced technology solutions and services to Government, Defense, and Commercial sectors.
